Visa: Visit Visa | Availability: Immediate Joiner | Location: Willing to Relocate

SUMMARY

BTech Computer Science graduate with hands-on experience in full-stack web development, AI/ML engineering, and REST API design. Proficient in Python, Django, React, Node.js, and machine learning frameworks including scikit-learn, NLTK, and YOLO. Experienced in LLM API integration, NLP pipelines, computer vision, and cloud deployment (Render, GitHub Pages, CI/CD). Proven ability to deliver production-ready applications end-to-end — from database design and backend development to frontend integration and deployment. Immediate joiner seeking AI/ML Developer or Full Stack Developer roles in the UAE.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL

Frameworks & Libraries: Django, React, REST APIs, OpenCV, Ultralytics YOLO, NLTK, scikit-learn, Vite

Databases: PostgreSQL, MySQL, SQLite

Tools & Platforms: Git, GitHub, GitHub Pages, CI/CD, Render, Gunicorn, Stripe API, Cloudinary, Groq API, OpenAI API, dotenv

Concepts: Machine Learning, NLP, Computer Vision, LLM API Integration, OOP, Component-based Architecture, Agile

Soft Skills: Problem-Solving, Team Collaboration, Adaptability, Self-Learning, Attention to Detail, Analytical Thinking

EXPERIENCE

AI/ML Developer Intern — Cyber Intelligence Corps *Apr 2026 – Present*

- Built and trained custom YOLO models with Ultralytics and OpenCV using Roboflow for dataset annotation and live webcam/video inference pipelines.
- Developed chatbot systems progressively — rule-based, NLTK-based NLP, and LLM-powered using OpenAI API — with intent classification, entity recognition, and conversation memory.
- Applied NLP preprocessing (tokenization, stop-word removal, stemming, lemmatization) and word embedding models (GloVe, FastText) across supervised and unsupervised ML tasks.

Python Django Full Stack Developer Intern — Luminar Technolab *Jul 2024 – Mar 2025*

- Delivered production-ready full-stack applications by developing backend logic, database design, and frontend integration using Django, Python, and REST APIs.
- Worked across the full development lifecycle including debugging, Git/GitHub version control, and deployment; applied OOP principles and relational database design with MySQL and PostgreSQL.
- Collaborated in a team environment to build and test real-world project modules, strengthening skills in agile workflows and code review practices.

PROJECTS

AI Chatbot – Full-Stack Conversational AI — *React, Node.js, Express, Groq API* fathimathnahlasalamie.github.io/chatbot

- Production-deployed AI chatbot with a React/Vite frontend and a secured Node.js/Express backend that proxies Groq LLM API calls, keeping credentials off the browser.
- Implemented ChatGPT-style conversation history sidebar with auto-generated titles, localStorage persistence, and ability to switch, delete, and resume past conversations.
- Built mobile-responsive UI with hamburger navigation, dynamic textarea, and react-markdown rendering; deployed frontend to GitHub Pages and backend to Render.

ThriftStore – Full-Stack E-Commerce Platform — *Django, PostgreSQL, Stripe, Cloudinary, Render* thrifystore-55yl.onrender.com

- Designed and deployed a multi-role e-commerce platform (buyer, seller, admin) with Stripe payments in AED, Cloudinary media storage, PostgreSQL, WhiteNoise, and Gunicorn.
- Set up GitHub-based CI/CD on Render and resolved production deployment issues including Gunicorn config, Django 4.2+ STORAGES syntax, and CSRF trusted origins.
- Strengthened application security by remediating exposed API credentials and implementing environment variable management across development and production environments.

Fresh Mart – Grocery Application — *Django, Python, SQLite*

- Built a full-stack grocery management app with product listings, cart functionality, and order management using Django and SQLite.
- Designed relational database schema and implemented CRUD operations for product, user, and order records.

College & Library Management Systems — *Django, Python, SQL*

- Developed Django-based management systems for student, book, and transaction records with role-based access control and search functionality.
- Designed normalized relational database schemas and implemented CRUD workflows across academic and library modules.

EDUCATION

BTech – Computer Science & Engineering — **APJ Abdul Kalam Technological University**
